Contents

Preface xiii

Chapter 1. Basic Notions 1

Section 1.1. Linear Symplectic Geometry 1

Section 1.2. Symplectic and Poisson Manifolds 4

1.2.1. Cotangent Bundles 5

1.2.2. The Complex Space $\mathbb{C}^n$ and Its Complex Submanifolds. Kähler Manifolds 6

1.2.3. Orbits of Coadjoint Representation 6

Section 1.3. The Darboux Theorem 11

Section 1.4. Liouville Integrable Hamiltonian Systems. The Liouville Theorem 14

Section 1.5. Non-resonant and Resonant Systems 21

Section 1.6. Rotation Number 22

Section 1.7. The Momentum Mapping of an Integrable System and Its Bifurcation Diagram 25

Section 1.8. Non-degenerate Critical Points of the Momentum Mapping 27

1.8.1. The Case of Two Degrees of Freedom 27

1.8.2. Bott Integrals from the Viewpoint of the Four-Dimensional Symplectic Manifold 30

1.8.3. Non-degenerate Singularities in the Case of Many Degrees of Freedom 37

1.8.4. Types of Non-degenerate Singularities in the Multidimensional Case 40

Section 1.9. Main Types of Equivalence of Dynamical Systems 46

Chapter 2. The Topology of Foliations on Two-Dimensional Surfaces Generated by Morse Functions 49

Section 2.1. Simple Morse Functions 49

Section 2.2. Reeb Graph of a Morse Function 51

Section 2.3. Notion of an Atom 52

Section 2.4. Simple Atoms 54

2.4.1. The Case of Minimum and Maximum. The Atom A 54

2.4.2. The Case of an Orientable Saddle. The Atom B 55

2.4.3. The Case of a Non-orientable Saddle. The Atom $\widetilde{B}$ 56

2.4.4. The Classification of Simple Atoms 57

Section 2.5. Simple Molecules 59
2.5.1. Notion of a Simple Molecule 59
2.5.2. Realization Theorem 59
2.5.3. Examples of Simple Morse Functions and Simple Molecules 60
2.5.4. The Classification of Minimal Simple Morse Functions on Surfaces of Low Genus 64
Section 2.6. Complicated Atoms 68
Section 2.7. Classification of Atoms 72
2.7.1. Classification Problem 72
2.7.2. Algorithm of Enumeration of Atoms 72
2.7.3. Algorithm of Recognition of Identical Atoms 73
2.7.4. Atoms and f-Graphs 74
2.7.5. Oriented Atoms and Subgroups in the Group $\mathbb{Z} * \mathbb{Z}_2$ 79
2.7.6. Representation of Atoms as Immersions of Graphs into the Plane 81
2.7.7. Atoms as Cell Decompositions of Two-Dimensional Closed Surfaces 82
2.7.8. Table of Atoms of Low Complexity 83
2.7.9. Mirror-like Atoms 84
Section 2.8. Symmetry Groups of Oriented Atoms and the Universal Covering Tree 95
2.8.1. Symmetries of f-Graphs 95
2.8.2. The Universal Covering Tree over f-Graphs. An f-Graph as a Quotient Space of the Universal Tree 96
2.8.3. The Correspondence between f-Graphs and Subgroups in $\mathbb{Z} * \mathbb{Z}_2$ 99
2.8.4. The Graph J of the Symmetry Group of an f-Graph. Totally Symmetric f-Graphs 100
2.8.5. The List of Totally Symmetric Planar Atoms. Examples of Totally Symmetric Atoms of Genus $g > 0$ 105
2.8.6. Atoms as Surfaces of Constant Negative Curvature 112
Section 2.9. Notion of a Molecule 115
Section 2.10. Approximation of Complicated Molecules by Simple Ones 120
Section 2.11. Classification of Morse–Smale Flows on Two-Dimensional Surfaces by Means of Atoms and Molecules 124

Chapter 3. Rough Liouville Equivalence of Integrable Systems with Two Degrees of Freedom 129
Section 3.1. Classification of Non-degenerate Critical Submanifolds on Isoenergy 3-Surfaces 129
Section 3.2. The Topological Structure of a Neighborhood of a Singular Leaf 135
Section 3.3. Topologically Stable Hamiltonian Systems 142
Section 3.4. Example of a Topologically Unstable Integrable System 146
Section 3.5. 2-Atoms and 3-Atoms 147
Section 3.6. Classification of 3-Atoms 152
Section 3.7. 3-Atoms as Bifurcations of Liouville Tori 153
Section 3.8. The Molecule of an Integrable System 154
Section 3.9. Complexity of Integrable Systems 156

Chapter 4. Liouville Equivalence of Integrable Systems with Two Degrees of Freedom 159
Section 4.1. Admissible Coordinate Systems on the Boundary of a 3-Atom 159
Section 4.2. Gluing Matrices and Superfluous Frames 166
Section 4.3. Invariants (Numerical Marks) r, ε, and n 168
4.3.1. Marks r_i and ε_i 168
4.3.2. Marks n_k and Families in a Molecule 169

Section 4.4. The Marked Molecule is a Complete Invariant of Liouville Equivalence 171
Section 4.5. The Influence of the Orientation 172
4.5.1. Change of Orientation of an Edge of a Molecule 172
4.5.2. Change of Orientation on a 3-Manifold Q 173
4.5.3. Change of Orientation of a Hamiltonian Vector Field 174
Section 4.6. Realization Theorem 174
Section 4.7. Simple Examples of Molecules 177
Section 4.8. Hamiltonian Systems with Critical Klein Bottles 184
Section 4.9. Topological Obstructions to Integrability of Hamiltonian Systems with Two Degrees of Freedom 187
4.9.1. The Class (M) 187
4.9.2. The Class (H) 188
4.9.3. The Class (Q) 188
4.9.4. The Class (W) of Graph-Manifolds 189
4.9.5. The Class (H') of Manifolds Related to Hamiltonians with Tame Integrals 190
4.9.6. The Coincidence of the Four Classes of 3-Manifolds 190

Chapter 5. Orbital Classification of Integrable Systems with Two Degrees of Freedom 195
Section 5.1. Rotation Function and Rotation Vector 195
Section 5.2. Reduction of the Three-Dimensional Orbital Classification to the Two-Dimensional Classification up to Conjugacy 199
5.2.1. Transversal Sections 199
5.2.2. Poincaré Flow and Poincaré Hamiltonian 201
5.2.3. Reduction Theorem 204
Section 5.3. General Concept of Constructing Orbital Invariants of Integrable Hamiltonian Systems 207

Chapter 6. Classification of Hamiltonian Flows on Two-Dimensional Surfaces up to Topological Conjugacy 211
Section 6.1. Invariants of a Hamiltonian System on a 2-Atom 211
6.1.1. Λ-Invariant 212
6.1.2. Δ-Invariant and Z-Invariant 218
Section 6.2. Classification of Hamiltonian Flows with One Degree of Freedom up to Topological Conjugacy on Atoms 222
Section 6.3. Classification of Hamiltonian Flows on 2-Atoms with Involution up to Topological Conjugacy 226
Section 6.4. The Pasting-Cutting Operation 228
Section 6.5. Description of the Sets of Admissible Δ-Invariants and Z-Invariants 234

Chapter 7. Smooth Conjugacy of Hamiltonian Flows on Two-Dimensional Surfaces 239
Section 7.1. Constructing Smooth Invariants on 2-Atoms 239
Section 7.2. Theorem of Classification of Hamiltonian Flows on Atoms up to Smooth Conjugacy 248

Chapter 8. Orbital Classification of Integrable Hamiltonian Systems with Two Degrees of Freedom. The Second Step 255
Section 8.1. Superfluous t-Frame of a Molecule (Topological Case). The Main Lemma on t-Frames 256
Section 8.2. The Group of Transformations of Transversal Sections. Pasting-Cutting Operation 263
Section 8.3. The Action of $G\mathbb{P}$ on the Set of Superfluous t-Frames 267

Section 8.4. Three General Principles for Constructing Invariants 268
8.4.1. First General Principle 268
8.4.2. Second General Principle 269
8.4.3. Third General Principle 269
Section 8.5. Admissible Superfluous t-Frames and a Realization Theorem 269
8.5.1. Realization of a Frame on an Atom 269
8.5.2. Realization of a Frame on an Edge of a Molecule 273
8.5.3. Realization of a Frame on the Whole Molecule 276
Section 8.6. Construction of Orbital Invariants in the Topological Case. A t-Molecule 278
8.6.1. The R-Invariant and the Index of a System on an Edge 278
8.6.2. b-Invariant (on the Radicals of a Molecule) 280
8.6.3. $\widetilde{A}$-Invariant 282
8.6.4. $\Delta\widetilde{Z}[\widetilde{\Theta}]$-Invariant 283
8.6.5. Final Definition of a t-Molecule for an Integrable System 285
Section 8.7. Theorem on the Topological Orbital Classification of Integrable Systems with Two Degrees of Freedom 286
Section 8.8. A Particular Case: Simple Integrable Systems 291
Section 8.9. Smooth Orbital Classification 292

Chapter 9. Liouville Classification of Integrable Systems with Two Degrees of Freedom in Four-Dimensional Neighborhoods of Singular Points 299
Section 9.1. l-Type of a Four-Dimensional Singularity 299
Section 9.2. The Loop Molecule of a Four-Dimensional Singularity 304
Section 9.3. Center–Center Case 306
Section 9.4. Center–Saddle Case 308
Section 9.5. Saddle–Saddle Case 313
9.5.1. The Structure of a Singular Leaf 313
9.5.2. Cl-Type of a Singularity 318
9.5.3. The List of Saddle–Saddle Singularities of Small Complexity 322
Section 9.6. Almost Direct Product Representation of a Four-Dimensional Singularity 339
Section 9.7. Proof of the Classification Theorems 348
9.7.1. Proof of Theorem 9.3 348
9.7.2. Proof of Theorem 9.4 (Realization Theorem) 349
Section 9.8. Focus–Focus Case 350
9.8.1. The Structure of a Singular Leaf of Focus–Focus Type 350
9.8.2. Classification of Focus–Focus Singularities 353
9.8.3. Model Example of a Focus–Focus Singularity and the Realization Theorem 356
9.8.4. The Loop Molecule and Monodromy Group of a Focus–Focus Singularity 358
Section 9.9. Almost Direct Product Representation for Multidimensional Non-degenerate Singularities of Liouville Foliations 363

Chapter 10. Methods of Calculation of Topological Invariants of Integrable Hamiltonian Systems 373
Section 10.1. General Scheme for Topological Analysis of the Liouville Foliation 373
10.1.1. Momentum Mapping 373
10.1.2. Construction of the Bifurcation Diagram 374
10.1.3. Verification of the Non-degeneracy Condition 374
10.1.4. Description of the Atoms of the System 375
10.1.5. Construction of the Molecule of the System on a Given Energy Level 376
10.1.6. Computation of Marks 377

Section 10.2. Methods for Computing Marks 377
Section 10.3. The Loop Molecule Method 378
Section 10.4. List of Typical Loop Molecules 382
10.4.1. Loop Molecules of Regular Points of the Bifurcation Diagram 382
10.4.2. Loop Molecules of Non-degenerate Singularities 384
Section 10.5. The Structure of the Liouville Foliation for Typical Degenerate Singularities 386
Section 10.6. Typical Loop Molecules Corresponding to Degenerate One-Dimensional Orbits 389
Section 10.7. Computation of r- and ε-Marks by Means of Rotation Functions 395
Section 10.8. Computation of the n-Mark by Means of Rotation Functions 398
Section 10.9. Relationship Between the Marks of the Molecule and the Topology of Q^3 402
Chapter 11. Integrable Geodesic Flows on Two-Dimensional Surfaces 409
Section 11.1. Statement of the Problem 409
Section 11.2. Topological Obstructions to Integrability of Geodesic Flows on Two-Dimensional Surfaces 412
Section 11.3. Two Examples of Integrable Geodesic Flows 416
11.3.1. Surfaces of Revolution 416
11.3.2. Liouville Metrics 418
Section 11.4. Riemannian Metrics Whose Geodesic Flows are Integrable by Means of Linear or Quadratic Integrals. Local Theory 420
11.4.1. Some General Properties of Polynomial Integrals of Geodesic Flows. Local Theory 420
11.4.2. Riemannian Metrics Whose Geodesic Flows Admit a Linear Integral. Local Theory 423
11.4.3. Riemannian Metrics Whose Geodesic Flows Admit a Quadratic Integral. Local Theory 424
Section 11.5. Linearly and Quadratically Integrable Geodesic Flows on Closed Surfaces 434
11.5.1. The Torus 434
11.5.2. The Klein Bottle 447
11.5.3. The Sphere 457
11.5.4. The Projective Plane 472
Chapter 12. Liouville Classification of Integrable Geodesic Flows on Two-Dimensional Surfaces 477
Section 12.1. The Torus 477
Section 12.2. The Klein Bottle 491
12.2.1. Quadratically Integrable Geodesic Flow on the Klein Bottle 491
12.2.2. Linearly Integrable Geodesic Flows on the Klein Bottle 496
12.2.3. Quasi-Linearly Integrable Geodesic Flows on the Klein Bottle 497
12.2.4. Quasi-Quadratically Integrable Geodesic Flows on the Klein Bottle 498
Section 12.3. The Sphere 500
12.3.1. Quadratically Integrable Geodesic Flows on the Sphere 500
12.3.2. Linearly Integrable Geodesic Flows on the Sphere 510
Section 12.4. The Projective Plane 515
12.4.1. Quadratically Integrable Geodesic Flows on the Projective Plane 515
12.4.2. Linearly Integrable Geodesic Flows on the Projective Plane 518

Chapter 13. Orbital Classification of Integrable Geodesic Flows on Two-Dimensional Surfaces 521
Section 13.1. Case of the Torus 521
13.1.1. Flows with Simple Bifurcations (Atoms) 521
13.1.2. Flows with Complicated Bifurcations (Atoms) 530
Section 13.2. Case of the Sphere 532
Section 13.3. Examples of Integrable Geodesic Flows on the Sphere 535
13.3.1. The Triaxial Ellipsoid 535
13.3.2. The Standard Sphere 539
13.3.3. The Poisson Sphere 541
Section 13.4. Non-triviality of Orbital Equivalence Classes and Metrics with Closed Geodesics 542
Chapter 14. The Topology of Liouville Foliations in Classical Integrable Cases in Rigid Body Dynamics 551
Section 14.1. Integrable Cases in Rigid Body Dynamics 551
Section 14.2. Topological Type of Isoenergy 3-Surfaces 560
14.2.1. The Topology of the Isoenergy Surface and the Bifurcation Diagram 560
14.2.2. Euler Case 563
14.2.3. Lagrange Case 565
14.2.4. Kovalevskaya Case 569
14.2.5. Zhukovskiĭ Case 571
14.2.6. Goryachev–Chaplygin–Sretenskiĭ Case 574
14.2.7. Clebsch Case 576
14.2.8. Steklov Case 579
Section 14.3. Liouville Classification of Systems in the Euler Case 580
Section 14.4. Liouville Classification of Systems in the Lagrange Case 590
Section 14.5. Liouville Classification of Systems in the Kovalevskaya Case 598
Section 14.6. Liouville Classification of Systems in the Goryachev–Chaplygin–Sretenskiĭ Case 608
Section 14.7. Liouville Classification of Systems in the Zhukovskiĭ Case 614
Section 14.8. Rough Liouville Classification of Systems in the Clebsch Case 622
Section 14.9. Rough Liouville Classification of Systems in the Steklov Case 627
Section 14.10. Rough Liouville Classification of Integrable Four-Dimensional Rigid Body Systems 631
Section 14.11. The Complete List of Molecules Appearing in Integrable Cases of Rigid Body Dynamics 644
Chapter 15. Maupertuis Principle and Geodesic Equivalence 647
Section 15.1. General Maupertuis Principle 647
Section 15.2. Maupertuis Principle in Rigid Body Dynamics 652
Section 15.3. Classical Cases of Integrability in Rigid Body Dynamics and Related Integrable Geodesic Flows on the Sphere 656
15.3.1. Euler Case and the Poisson Sphere 657
15.3.2. Lagrange Case and Metrics of Revolution 658
15.3.3. Clebsch Case and Geodesic Flow on the Ellipsoid 658
15.3.4. Goryachev–Chaplygin Case and the Corresponding Integrable Geodesic Flow on the Sphere 660
15.3.5. Kovalevskaya Case and the Corresponding Integrable Geodesic Flow on the Sphere 661
Section 15.4. Conjecture on Geodesic Flows with Integrals of High Degree 663
Section 15.5. Dini Theorem and the Geodesic Equivalence of Riemannian Metrics 669
Section 15.6. Generalized Dini–Maupertuis Principle 677

Section 15.7. Orbital Equivalence of the Neumann Problem and the Jacobi Problem 679
Section 15.8. Explicit Forms of Some Remarkable Hamiltonians and Their Integrals in Separating Variables 681
Chapter 16. Euler Case in Rigid Body Dynamics and Jacobi Problem about Geodesics on the Ellipsoid. Orbital Isomorphism 687
Section 16.1. Introduction 687
Section 16.2. Jacobi Problem and Euler Case 688
Section 16.3. Liouville Foliations 690
Section 16.4. Rotation Functions 692
Section 16.5. The Main Theorem 697
Section 16.6. Smooth Invariants 698
Section 16.7. Topological Non-conjugacy of the Jacobi Problem and the Euler Case 701
References 705
Subject Index 725
