

CONTENTS

Chapter 1. Basic Notions	1
1.1. Linear Symplectic Geometry	1
1.2. Symplectic and Poisson Manifolds	2
1.2.1. Cotangent Bundles	2
1.2.2. Orbits of Coadjoint Representation	3
1.3. Local Properties of Symplectic Manifolds	4
1.4. Liouville Integrable Hamiltonian Systems. Liouville Theorem	6
1.5. Nonresonant and Resonant Systems	8
1.6. Rotation Number	9
1.7. Momentum Mapping of an Integrable Hamiltonian System and Its Bifurcation Diagram	12
1.8. Nondegenerate Singularities of the Momentum Mapping and Bott Functions	14
1.9. Bott Integrals from the Point of View of the Four-Dimen- sional Symplectic Manifold	15
1.10. Main Types of Equivalence of Dynamical Systems	17
Chapter 2. Topology of Foliations Generated by Morse Func- tions on Two-Dimensional Surfaces	21
2.1. Simple Morse Functions	21
2.2. Reeb Graph of a Morse Function	23
2.3. Concept of an Atom	24
2.4. Simple Molecules	28

2.5. Complicated Atoms	29
2.6. Classification of Atoms	32
2.7. Notion of a Molecule	53
2.8. Approximation of Complicated Molecules by Simple Ones	57

Chapter 3. Rough Liouville Equivalence of Integrable Systems

with Two Degrees of Freedom 59

3.1. Classification of Nondegenerate Critical Submanifolds on Isoenergy 3-Surfaces	59
3.2. The Topological Structure of a Neighborhood of a Singular Leaf	63
3.3. Topologically Stable Hamiltonian Systems	67
3.4. 2-Atoms and 3-Atoms	70
3.5. Classification of 3-Atoms	74
3.6. 3-Atoms as Bifurcations of Liouville Tori	74
3.7. The Molecule of an Integrable System	78

Chapter 4. Liouville Equivalence of Integrable Systems with Two Degrees of Freedom

81

4.1. Admissible Coordinate Systems on the Boundary of a 3-Atom	81
4.2. Gluing Matrices and Superfluous Frames	85
4.3. Invariants (Numerical Marks) r , ε , and n	86
4.3.1. Marks r_i and ε_i	86
4.3.2. Marks n_k and Families in a Molecule	87
4.4. The Marked Molecule	87
4.5. Influence of the Orientation	88
4.5.1. Change of the Orientation on an Edge of the Molecule	88
4.5.2. Change of the Orientation on a 3-Manifold Q	88
4.5.3. Change of the Orientation of a Hamiltonian Vector Field	90
4.6. Realization Theorem	90
4.7. Simple Examples of Molecules	91
4.8. Hamiltonian Systems with Critical Klein Bottles	93

Chapter 5. Trajectory Classification of Integrable Systems with Two Degrees of Freedom

97

5.1. Rotation Function and Rotation Vector	97
5.2. Reduction of the Three-Dimensional	100

5.2.1. Transversal Sections	100
5.2.2. Poincaré Flow and Poincaré Hamiltonian	102
5.2.3. Reduction Theorem	104
5.3. General Concept of Constructing Trajectory Invariants of Integrable Hamiltonian Systems	105
Chapter 6. Integrable Geodesic Flows on Two-Dimensional Surfaces	109
6.1. Statement of the Problem	109
6.2. Topological Obstructions to Integrability of Geodesic Flows on Two-Dimensional Surfaces	111
6.3. Two Examples of Integrable Geodesic Flows	115
6.3.1. Surfaces of Revolution	115
6.3.2. Liouville Metrics	117
6.4. Riemannian Metrics Whose Geodesic Flows are Integrable by Means of Linear or Quadratic Integrals. Local Theory	119
6.4.1. Some General Properties of Polynomial Integrals of Geodesic Flows. Local Theory	119
6.4.2. Riemannian Metrics Whose Geodesic Flows Admit a Linear Integral. Local Theory	120
6.4.3. Riemannian Metrics Whose Geodesic Flows Admit a Quadratic Integral. Local Theory	121
6.5. Linearly and Quadratically Integrable Geodesic Flows on Closed Surfaces	131
6.5.1. Torus	131
6.5.2. Klein Bottle	143
6.5.3. Sphere	147
6.5.4. Projective Plane	164
Chapter 7. Liouville Classification of Integrable Geodesic Flows on Two-Dimensional Surface	167
7.1. Liouville Classification of Linearly and Quadratically Integrable Geodesic Flows on the Torus	167
7.2. Liouville Classification of Linearly and Quadratically Integrable Geodesic Flows on the Klein Bottle	185
7.2.1. Quadratically Integrable Geodesic Flow on the Klein Bottle	185

7.2.2. Linearly Integrable Geodesic Flows on the Klein Bottle	192
7.2.3. Quasi-Linearly Integrable Geodesic Flows on the Klein Bottle	194
7.2.4. Quasi-Quadratically Integrable Geodesic Flows on the Klein Bottle	195
7.3. Liouville Classification of Linearly and Quadratically Integrable Geodesic Flows on the Two-Dimensional Sphere	198
7.3.1. Quadratically Integrable Geodesic Flows on the Sphere	198
7.3.2. Linearly Integrable Geodesic Flows on the Sphere	209
7.4. Liouville Classification of Linearly and Quadratically Integrable Geodesic Flows on the Projective Plane	217
7.4.1. Quadratically Integrable Geodesic Flows on the Projective Plane	217
7.4.2. Linearly Integrable Geodesic Flows on the Projective Plane	220

Chapter 8. Trajectory Classification of Integrable Geodesic Flows on Two-Dimensional Surfaces 223

8.1. Case of the Torus	223
8.1.1. Flows with Simple Bifurcations (Atoms)	223
8.1.2. Flows With Complicated Bifurcations (Atoms)	231
8.2. Case of the Sphere	233
8.3. Examples of Integrable Geodesic Flows on the Sphere	237
8.3.1. The Triaxial Ellipsoid	237
8.3.2. The Standard Sphere	242
8.3.3. Poisson Sphere	244
8.4. Non-Triviality of Trajectory Equivalence Classes and Metrics with Closed Geodesics	246

Chapter 9. Maupertuis Principle and Geodesic Equivalence 255

9.1. General Maupertuis Principle	255
9.2. Maupertuis Principle in Rigid Body Dynamics	257

9.3. Maupertuis Principle and an Explicit Form of the Metric on the Sphere, Generated by a Quadratic Hamiltonian on the Lie Algebra $e(3)$	259
9.4. Classical Cases of Integrability in Rigid Body Dynamics and Related Integrable Geodesic Flows on the Sphere	260
9.4.1. Euler Case and the Poisson Sphere	261
9.4.2. Lagrange Case and Metrics of Revolution	262
9.4.3. Clebsch Case and Geodesic Flow on the Ellipsoid	262
9.4.4. Goryachev–Chaplygin Case and the Corresponding Integrable Geodesic Flow on the Sphere	264
9.4.5. Kovalevskaya Case and the Corresponding Integrable Geodesic Flow on the Sphere	266
9.5. Conjecture on Geodesic Flows with Integrals of High Degree	268
9.6. Dini Theorem and the Geodesic Equivalence of Riemannian Metrics	272
9.7. Generalized Dini-Maupertuis Principle	276
9.8. Trajectory Equivalence of the Neumann Problem and Jacobi Problem	278
9.9. Explicit Forms of Some Remarkable Hamiltonians and Their Integrals in Separating Variables	280

Chapter 10. Euler Case in Rigid Body Dynamics and Jacobi Problem About Geodesics on the Ellipsoid. Trajectory Isomorphism	287
10.1. Introduction	287
10.2. Jacobi Problem and Euler Case	288
10.3. Liouville Foliations	290
10.4. Rotation Functions	293
10.5. The Main Theorem	298
10.6. Smooth Invariants	300
10.7. Topological Non-Conjugacy of the Jacobi Problem and the Euler Case	303
