

## CHAPTER 1

Examples of Manifolds	1
§1. The concept of a manifold	1
1.1. Definition of a manifold	1
1.2. Mappings of manifolds; tensors on manifolds	5
1.3. Embeddings and immersions of manifolds. Manifolds with boundary	9
§2. The simplest examples of manifolds	10
2.1. Surfaces in Euclidean space. Transformation groups as manifolds	10
2.2. Projective spaces	15
2.3. Exercises	19
§3. Essential facts from the theory of Lie groups	20
3.1. The structure of a neighbourhood of the identity of a Lie group. The Lie algebra of a Lie group. Semisimplicity	20
3.2. The concept of a linear representation. An example of a non-matrix Lie group	28
§4. Complex manifolds	31
4.1. Definitions and examples	31
4.2. Riemann surfaces as manifolds	37
§5. The simplest homogeneous spaces	41
5.1. Action of a group on a manifold	41
5.2. Examples of homogeneous spaces	42
5.3. Exercises	46
§6. Spaces of constant curvature (symmetric spaces)	46
6.1. The concept of a symmetric space	46
6.2. The isometry group of a manifold. Properties of its Lie algebra	49
6.3. Symmetric spaces of the first and second types	51
6.4. Lie groups as symmetric spaces	53
6.5. Constructing symmetric spaces. Examples	55
6.6. Exercises	58

§7. Vector bundles on a manifold	59
7.1. Constructions involving tangent vectors	59
7.2. The normal vector bundle on a submanifold	62
CHAPTER 2	
Foundational Questions. Essential Facts Concerning Functions on a Manifold. Typical Smooth Mappings	
§8. Partitions of unity and their applications	65
8.1. Partitions of unity	66
8.2. The simplest applications of partitions of unity. Integrals over a manifold and the general Stokes formula	69
8.3. Invariant metrics	74
§9. The realization of compact manifolds as surfaces in $\mathbb{R}^N$	76
§10. Various properties of smooth maps of manifolds	77
10.1. Approximation of continuous mappings by smooth ones	77
10.2. Sard's theorem	79
10.3. Transversal regularity	83
10.4. Morse functions	86
§11. Applications of Sard's theorem	90
11.1. The existence of embeddings and immersions	90
11.2. The construction of Morse functions as height functions	93
11.3. Focal points	95
CHAPTER 3	
The Degree of a Mapping. The Intersection Index of Submanifolds. Applications	
§12. The concept of homotopy	99
12.1. Definition of homotopy. Approximation of continuous maps and homotopies by smooth ones	99
12.2. Relative homotopies	102
§13. The degree of a map	102
13.1. Definition of degree	102
13.2. Generalizations of the concept of degree	104
13.3. Classification of homotopy classes of maps from an arbitrary manifold to a sphere	106
13.4. The simplest examples	108
§14. Applications of the degree of a mapping	110
14.1. The relationship between degree and integral	110
14.2. The degree of a vector field on a hypersurface	112
14.3. The Whitney number. The Gauss–Bonnet formula	114
14.4. The index of a singular point of a vector field	118
14.5. Transverse surfaces of a vector field. The Poincaré–Bendixson theorem	122
§15. The intersection index and applications	125
15.1. Definition of the intersection index	125
15.2. The total index of a vector field	127

15.3. The signed number of fixed points of a self-map (the Lefschetz number). The Brouwer fixed-point theorem	130
15.4. The linking coefficient	133

## CHAPTER 4

<b>Orientability of Manifolds. The Fundamental Group. Covering Spaces (Fibre Bundles with Discrete Fibre)</b>	<b>135</b>
§16. Orientability and homotopies of closed paths	135
16.1. Transporting an orientation along a path	135
16.2. Examples of non-orientable manifolds	137
§17. The fundamental group	139
17.1. Definition of the fundamental group	139
17.2. The dependence on the base point	141
17.3. Free homotopy classes of maps of the circle	142
17.4. Homotopic equivalence	143
17.5. Examples	144
17.6. The fundamental group and orientability	147
§18. Covering maps and covering homotopies	148
18.1. The definition and basic properties of covering spaces	148
18.2. The simplest examples. The universal covering	150
18.3. Branched coverings. Riemann surfaces	153
18.4. Covering maps and discrete groups of transformations	156
§19. Covering maps and the fundamental group. Computation of the fundamental group of certain manifolds	157
19.1. Monodromy	157
19.2. Covering maps as an aid in the calculation of fundamental groups	160
19.3. The simplest of the homology groups	164
19.4. Exercises	166
§20. The discrete groups of motions of the Lobachevskian plane	166

## CHAPTER 5

<b>Homotopy Groups</b>	<b>185</b>
§21. Definition of the absolute and relative homotopy groups. Examples	185
21.1. Basic definitions	185
21.2. Relative homotopy groups. The exact sequence of a pair	189
§22. Covering homotopies. The homotopy groups of covering spaces and loop spaces	193
22.1. The concept of a fibre space	193
22.2. The homotopy exact sequence of a fibre space	195
22.3. The dependence of the homotopy groups on the base point	198
22.4. The case of Lie groups	201
22.5. Whitehead multiplication	204
§23. Facts concerning the homotopy groups of spheres. Framed normal bundles. The Hopf invariant	207
23.1. Framed normal bundles and the homotopy groups of spheres	207

23.2. The suspension map	212
23.3. Calculation of the groups $\pi_{n+1}(S^n)$	214
23.4. The groups $\pi_{n+2}(S^n)$	216

## CHAPTER 6

<b>Smooth Fibre Bundles</b>	<b>220</b>
§24. The homotopy theory of fibre bundles	220
24.1. The concept of a smooth fibre bundle	220
24.2. Connexions	225
24.3. Computation of homotopy groups by means of fibre bundles	228
24.4. The classification of fibre bundles	235
24.5. Vector bundles and operations on them	241
24.6. Meromorphic functions	243
24.7. The Picard–Lefschetz formula	249
§25. The differential geometry of fibre bundles	251
25.1. $G$ -connexions on principal fibre bundles	251
25.2. $G$ -connexions on associated fibre bundles. Examples	259
25.3. Curvature	263
25.4. Characteristic classes: Constructions	269
25.5. Characteristic classes: Enumeration	278
§26. Knots and links. Braids	286
26.1. The group of a knot	286
26.2. The Alexander polynomial of a knot	289
26.3. The fibre bundle associated with a knot	290
26.4. Links	292
26.5. Braids	294

## CHAPTER 7

<b>Some Examples of Dynamical Systems and Foliations on Manifolds</b>	<b>297</b>
§27. The simplest concepts of the qualitative theory of dynamical systems. Two-dimensional manifolds	297
27.1. Basic definitions	297
27.2. Dynamical systems on the torus	302
§28. Hamiltonian systems on manifolds. Liouville's theorem. Examples	308
28.1. Hamiltonian systems on cotangent bundles	308
28.2. Hamiltonian systems on symplectic manifolds. Examples	309
28.3. Geodesic flows	312
28.4. Liouville's theorem	314
28.5. Examples	317
§29. Foliations	322
29.1. Basic definitions	322
29.2. Examples of foliations of codimension 1	327
§30. Variational problems involving higher derivatives	333
30.1. Hamiltonian formalism	333
30.2. Examples	337

30.3. Integration of the commutativity equations. The connexion with the Kovalevskaja problem. Finite-zoned periodic potentials	340
30.4. The Korteweg–deVries equation. Its interpretation as an infinite-dimensional Hamiltonian system	344
30.5 Hamiltonian formalism of field systems	347
CHAPTER 8	
The Global Structure of Solutions of Higher-Dimensional Variational Problems	358
§31. Some manifolds arising in the general theory of relativity (GTR)	358
31.1. Statement of the problem	358
31.2. Spherically symmetric solutions	359
31.3. Axially symmetric solutions	369
31.4. Cosmological models	374
31.5. Friedman's models	377
31.6. Anisotropic vacuum models	381
31.7. More general models	385
§32. Some examples of global solutions of the Yang–Mills equations.	
Chiral fields	393
32.1. General remarks. Solutions of monopole type	393
32.2. The duality equation	399
32.3. Chiral fields. The Dirichlet integral	403
§33. The minimality of complex submanifolds	414
Bibliography	419
Index	423
