

Preface	vii
Introduction	1
CHAPTER I. Historical Survey and Introduction to the Classical Theory of Minimal Surfaces	21
§1. The sources of multidimensional calculus of variations	21
§2. The 19th century—the epoch of discovery of the main properties of minimal surfaces	30
§3. Topological and physical properties of two-dimensional minimal surfaces	43
§4. Plateau's four experimental principles and their consequences for two-dimensional minimal surfaces	62
§5. Two-dimensional minimal surfaces in Euclidean space and in a Riemannian manifold	68
CHAPTER II. Information about Some Topological Facts Used in the Modern Theory of Minimal Surfaces	95
§1. Groups of singular and cellular homology	95
§2. Cohomology groups	97
CHAPTER III. The Modern State of the Theory of Minimal Surfaces	99
§1. Minimal surfaces and homology	99
§2. Theory of currents and varifolds	129
§3. The theory of minimal cones and the equivariant Plateau problem	138
CHAPTER IV. The Multidimensional Plateau Problem in the Spectral Class of All Manifolds with a Fixed Boundary	167

§1. The solution of the multidimensional Plateau problem in the class of spectra of maps of smooth manifolds with a fixed boundary. An analog of the theorems of Douglas and Rado in the case of arbitrary Riemannian manifolds. The solution of Plateau's problem in an arbitrary class of spectra of closed bordant manifolds	167
§2. Some versions of Plateau's problem require for their statement the concepts of generalized homology and cohomology	178
§3. In certain cases the Dirichlet problem for the equation of a minimal surface of large codimension does not have a solution	183
§4. Some new methods for an effective construction of globally minimal surfaces in Riemannian manifolds	186
CHAPTER V. Multidimensional Minimal Surfaces and Harmonic Maps	207
§1. The multidimensional Dirichlet functional and harmonic maps. The problem of minimizing the Dirichlet functional on the homotopy class of a given map	207
§2. Connections between the topology of manifolds and properties of harmonic maps	217
§3. Some unsolved problems	228
CHAPTER VI. Multidimensional Variational Problems and Multivarifolds. The Solution of Plateau's Problem in a Homotopy Class of a Map of a Multivarifold	233
§1. Classical formulations	233
§2. Multidimensional variational problems	234
§3. The functional language of multivarifolds	239
§4. Statement of Problems B, B', and B'' in the language of the theory of multivarifolds	249
CHAPTER VII. The Space of Multivarifolds	253
§1. The topology of the space of multivarifolds	253
§2. Local characteristics of multivarifolds	260
§3. Induced maps	266
CHAPTER VIII. Parametrizations and Parametrized Multivarifolds	273
§1. Spaces of parametrizations and parametrized multivarifolds	273
§2. The structure of spaces of parametrizations and parametrized multivarifolds	280

§3. Exact parametrizations	290
§4. Real and integral multivarifolds	295
CHAPTER IX. Problems of Minimizing Generalized Integrand in Classes of Parametrizations and Parametrized Multivarifolds. A Criterion for Global Minimality	299
§1. A theorem on deformation	299
§2. Isoperimetric inequalities	309
§3. Statement of variational problems in classes of parametrizations and parametrized multivarifolds	314
§4. Existence and properties of minimal parametrizations and parametrized multivarifolds	317
CHAPTER X. Criteria for Global Minimality	331
§1. Statement of the problem in the functional language of currents	331
§2. Generalized forms and their properties	334
§3. Conditions for global minimality of currents	336
§4. Globally minimal currents in symmetric problems	342
§5. Specific examples of globally minimal currents and surfaces	350
CHAPTER XI. Globally Minimal Surfaces in Regular Orbits of the Adjoint Representation of the Classical Lie Groups	359
§1. Statement of the problem. Formulation of the main theorem	359
§2. Necessary information from the theory of representations of the compact Lie groups	361
§3. Topological structure of the space G/T_G	365
§4. A brief outline of the proof of the main theorem	368
Appendix. Volumes of Closed Minimal Surfaces and the Connection with the Tensor Curvature of the Ambient Riemannian Space	377
Bibliography	381
Subject Index	401
