

Foreword	vii
Preface	xi
List of Contributors	xiii
Part 1	
Hamiltonian Systems	
Completeness of families of functions in involution related to compatible Poisson brackets A. V. BOLSINOV	3
Multidimensional Euler and Clebsch cases and Lie pencils A. V. BOLSINOV	25
Integrable Hamiltonian systems: Topological structure of saturated neighborhoods of nondegenerate singular points A. V. BOLSINOV AND V.S. MATVEEV	31
Self-dual Yang–Mills connections and generalized Nahm equations T.A. IVANOVA	57
Multiple points of geodesics and extremals for invariant variational problems on homogeneous spaces M. V. MESTSHERJAKOV	71
Euler–Poincaré dynamical systems and geodesic flows of ellipsoids: Topologically nonconjugation O.E. OREL	76

Part 2

Riemannian Geometry and Calculus of Variations

- A sufficient condition for the stability of symmetric cones of any codimension in Euclidean space \mathbb{R}^N
A.O. IVANOV 87
- Homogeneous Riemannian spaces with irreducible rotation group
O.V. MANTUROV 101
- Global minimality of cones for adjoint action of classical Lie groups
I.S. NOVIKOVA 193

Part 3

Topology

- Poincaré polynomials of some homogeneous spaces
O.V. MANTUROV 199
- A general algebraic approach to the problem of describing the second term of the Adams spectral sequence and stable homotopy groups of spheres
V.A. SMIRNOV 213
- Compact group actions on Hilbert modules and C^* -elliptic complexes
E.V. TROITSKY 251
- A remark on positively curved manifolds of dimensions 7 and 13
I.A. TAIMANOV 282

- Subject Index 297
