

Preface	xv
Chapter 1. Simplest Classical Variational Problems	1
§1 Equations of Extremals for Functionals	1
§2 Geometry of Extremals	5
2.1. The Zero-Dimensional and One-Dimensional Cases	5
2.2. Some Examples of the Simplest Multidimensional Functional. The Volume Functional	6
2.3. The Classical Plateau Problem in Dimension 2	12
2.4. The Second Fundamental Form on the Riemannian Submanifold	14
2.5. Local Minimality	16
2.6. First Examples of Globally Minimal Surfaces	18
Chapter 2. Multidimensional Variational Problems and Extraordinary (Co)Homology Theory	23
§3 The Multidimensional Plateau Problem and Its Solution in the Class of Mapping on Spectra of Manifolds with Fixed Boundary	23
3.1. The Classical Formulations (Finding the Absolute Minimum)	23
3.2. The Classical Formulations (Finding a Relative Minimum)	25
3.3. Difficulties Arising in the Minimization of the Volume Functional vol_k for $k > 2$. Appearance on Nonremovable Strata of Small Dimensions	26
3.4. Formulations of the Plateau Problem in the Language of the Usual Spectral Homology	29
3.5. The Classical Multidimensional Plateau Problem (the Absolute Minimum) and the Language of Bordism Theory	30
3.6. Spectral Bordism Theory as an Extraordinary Homology Theory	35
3.7. The Formulation of the Solution to the Plateau Problem (Existence of the Absolute Minimum in Spectral Bordism Classes)	38
§4 Extraordinary (Co)Homology Theories Determined for "Surfaces with Singularities"	41
4.1. The Characteristic Properties of (Co)Homology Theories	41

4.2.	Extraordinary (Co)Homology Theories for Finite Cell Complexes	43
4.3.	The Construction of Extraordinary (Co)Homology Theories for "Surfaces with Singularities" (on Compact Sets)	45
4.4.	Verifying the Characteristic Properties of the Constructed Theories	46
4.5.	Additional Properties of Extraordinary Spectral Theories	48
4.6.	Reduced (Co)Homology Groups on "Surfaces with Singularities"	49
§5	The Coboundary and Boundary of a Pair of Spaces (X, A)	49
5.1.	The Coboundary of a Pair (X, A)	50
5.2.	The Boundary of a Pair (X, A)	50
§6	Determination of Classes of Admissible Variations of Surfaces in Terms of (Co)Boundary of the Pair (X, A)	51
6.1.	Variational Classes $h(A, L, L')$ and $h(A, \tilde{L})$	51
6.2.	The Stability of Variational Classes	53
§7	Solution of the Plateau Problem (Finding Globally Minimal Surfaces (Absolute Minimum) in the Variational Classes $h(A, L, L')$ and $h(A, \tilde{L})$)	54
7.1.	The Formulation of the Problem	54
7.2.	The Basic Existence Theorem for Globally Minimal Surfaces. Solution of the Plateau Problem	56
7.3.	A Rough Outline of the Existence Theorem	59
§8	Solution of the Problem of Finding Globally Minimal Surfaces in Each Homotopy Class of Multivarifolds	61
Chapter 3. Explicit Calculation of Least Volumes (Absolute Minimum) of Topologically Nontrivial Minimal Surfaces		62
§9	Exhaustion Functions and Minimal Surfaces	62
9.1.	Certain Classical Problems	62
9.2.	Bordisms and Exhaustion Functions	64
9.3.	GM-Surfaces	65
9.4.	Formulation of the Problem of a Lower Estimate of the Minimal Surface Volume Function	66
§10	Definition and Simplest Properties of the Deformation Coefficient of a Vector Field	67
§11	Formulation of the Basic Theorem for the Lower Estimate of the Minimal Surface Volume Function	68
11.1.	Functions of the Interaction of a Globally Minimal Surface with a Wavefront	69
11.2.	Formulation of the Basic Volume Estimation Theorem	69
§12	Proof of the Basic Volume Estimation Theorem	71
§13	Certain Geometric Consequences	77

13.1.	On the Least Volume of Globally Minimal Surfaces Passing through the Centre of a Ball in Euclidean Space	77
13.2.	On the Least Volume of Globally Minimal Surfaces Passing through a Fixed Point in a Manifold	79
13.3.	On the Least Volume of Globally Minimal Surfaces Formed by the Integral Curves of a Field v	80
§14	Nullity of Riemannian, Compact, and Closed Manifolds. Geodesic Nullity and Least Volumes of Globally Minimal Surfaces of Realizing Type	81
14.1.	The Definition of the Nullity of a Manifold ²	81
14.2.	The Theorem on the Relation of Nullity with the Least Volumes of Surfaces of Realizing Type	83
14.3.	The Proof of the Reifenberg Conjecture Regarding the Existence of a Universal Upper Estimate of the "Complexity" on the Singular Points of Minimal Surfaces of Realizing Type	86
§15	Certain Topological Corollaries. Concrete Series of Examples of Globally Minimal Surfaces of Nontrivial Topological Type	88
15.1.	Globally Minimal Surfaces Realizing Nontrivial (Co)Cycles in Symmetric Spaces	88
15.2.	Compact Symmetric Spaces and Explicit Form of a Geodesic Diffeomorphism	89
15.3.	Explicit Computation of the Deformation Coefficient of a Radial Vector Field on a Symmetric Space	92
15.4.	An Explicit Formula for the Symmetric Space Geodesic Nullity	99
15.5.	Globally Minimal Surfaces of Least Volume ($\text{vol}_k X_0 = \Omega_k^0$) in Symmetric Spaces are Symmetric Spaces of Rank 1	99
15.6.	Proof of the Classification Theorem for Surfaces of Least Volume in Certain Classical Symmetric Spaces	102
Chapter 4. Locally Minimal Closed Surfaces Realizing Nontrivial (Co)Cycles and Elements of Symmetric Space Homotopy Groups		109
§16	Problem Formulation. Totally Geodesic Submanifolds in Lie Groups	109
§17	Necessary Results Concerning the Topological Structure of Compact Lie Groups and Symmetric Spaces	110
17.1.	Cohomology Algebras of Compact Lie Groups	110
17.2.	Subgroups Totally Nonhomologous to Zero	111
17.3.	Pontryagin Cycles in Compact Lie Groups	114
17.4.	Necessary Results Concerning Symmetric Spaces	115
§18	Lie Groups Containing a Totally Geodesic Submanifold Necessarily Contain Its Isometry Group	120

§19	Reduction of the Problem of the Description of (Co)Cycles Realizable by Totally Geodesic Submanifolds to the Problem of the Description of (Co)Homological Properties of Cartan Models	122
§20	Classification Theorem Describing Totally Geodesic Submanifolds Realizing Nontrivial (Co)Cycles in Compact Lie Group (Co)Homology	125
	20.1. The Statement of the Classification Theorem	125
	20.2. The Case of Spaces of Type II	126
	20.3. The Case of Spaces of Type I (Co)Homologically Trivial Cartan Models. Properties of the Squaring Map of a Symmetric Space	127
	20.4. The Case of Spaces of Type I. Spaces $SU(k)/SO(k)$	130
	20.5. The Case of Spaces of Type I. Spaces $SU(2m)/Sp(m)$	135
	20.6. The Case of Spaces of Type I. Spaces $S^{2l-1} = SO(2l)/SO(2l-1)$. Explicit Computation of Cocycles Realizable by Totally Geodesic Submanifolds of Type I	137
	20.7. The Case of Spaces of Type I. Space E_6/F_4	139
§21	Classification Theorem Describing Cocycles in the Compact Lie Group Cohomology Realizable by Totally Geodesic Spheres	145
	21.1. Classification Theorem Formulation	145
	21.2. Totally Geodesic Spheres Realizing Bott Periodicity	146
	21.3. Realization of Homotopy Group Elements of the Compact Lie Groups by Totally Geodesic Spheres	148
	21.4. Necessary Results Concerning the Spinor and Semispinor Representations of an Orthogonal Group	150
	21.5. Spinor Representation of the Orthogonal Group $SO(8)$ and the Cayley Number Automorphism Group	152
	21.6. Description of Totally Geodesic Spheres Realizing Nontrivial (Co)Cycles in Simple Lie Group Cohomology. The Case of the Group $SU(n)$	155
	21.7. The Case of the Groups $SO(n)$ and $Sp(2n)$	156
§22	Classification Theorem Describing Elements of Homotopy Groups of Symmetric Spaces of Type I, Realizable by Totally Geodesic Spheres	160
	22.1. Classification Theorem Statement	160
	22.2. Proof of the Classification Theorem. Relation between the Number of Linearly Independent Fields on Spheres and that of the Elements of Homotopy Groups Realizable by Totally Geodesic Spheres	162
Chapter 5. Variational Methods for Certain Topological Problems		170
§23	Bott Periodicity from the Dirichlet Multidimensional Functional Standpoint	170

23.1.	Explicit Description of the Bott Periodicity Isomorphism for the Unitary Group	170
23.2.	Unitary Periodicity and One-Dimensional Functionals	172
23.3.	The Periodicity Theorem for a Unitary Group is Based on the Dirichlet Functional Two-Dimensional Extremals	173
23.4.	The Periodicity Theorem for an Orthogonal Group is Based on the 8-Dimensional Dirichlet Functional Extremals	178
§24	Three Geometric Problems of Variational Calculus	181
24.1.	Minimal Cones and Singular Points of Minimal Surfaces	181
24.2.	The Equivariant Plateau Problem	185
24.3.	Representation of Equivariant Singularities as Singular Points of Closed Minimal Surfaces Embedded into Symmetric Spaces	199
24.4.	On the Existence of Nonlinear Functions Whose Graphs in Euclidean Space Are Minimal Surfaces	203
24.5.	Harmonic Mappings of Spheres in Nontrivial Homotopy Classes	205
24.6.	A Rough Outline of Certain Recent Results on the Link of Harmonic Mapping Properties to the Topology of Manifolds	210
24.7.	Properties of the Density of Smooth Mappings of Manifolds	221
24.8.	The Behaviour of the Dirichlet Functional on the 2-Connected Manifold Diffeomorphism Group. Proof of Theorem 24.6.9	225
24.9.	Necessary Topological Condition for the Existence of Nontrivial Globally Minimal Harmonic Mappings	232
24.10.	The Minimization of Dirichlet-Type Functionals	239
24.11.	Regularity of Harmonic Mappings	240
Chapter 6. Solution of the Plateau Problem in Classes of Mappings of Spectra of Manifolds with Fixed Boundary. Construction of Globally Minimal Surfaces in Variational Classes $h(A, L, L')$ and $h(A, \tilde{L})$		243
§25	The Cohomology Case. Computation of the Coboundary of the Pair $(X, A) = \bigcup_r (X_r, A_r)$ in Terms of Those of (X_r, A_r)	243
§26	The Homology Case. Computation of the Boundary of the Pair $(X, A) = \bigcup_r (X_r, A_r)$ in Terms of the Boundaries of (X_r, A_r)	251
§27	Closedness, Invariance, and Stability of Variational Classes	257
27.1.	S -Surgery of Surfaces in a Riemannian Manifold	257
27.2.	The Closedness of Variational Classes Relative to the Passage to the Limit	258
27.3.	The Invariance of Variational Classes Relative to S -Surgeries of Surfaces	261
27.4.	The Stability of Variational Classes	264
§28	The General Isoperimetric Inequality	268

28.1. Choice of a Special Coordinate System	268
28.2. Simplicial Points of Surfaces	269
28.3. Isoperimetric Inequality	270
§29 The Minimizing Process in Variational Classes $h(A, L, L')$ and $h(A, \tilde{L})$	277
29.1. The Minimizing Sequence of Surfaces. Density Functions Related to Surfaces	277
29.2. A Rough Outline of the Minimizing Process	278
29.3. The Constructive Method for the Minimizing Process and the Proof for Its Convergence. First Step	281
29.4. Second and Subsequent Steps in the Minimizing Process	290
29.5. The Theorem on the Coincidence of the Least Stratified Volume with Least λ -Vector in a Variational Class	294
§30 Properties of Density Functions. The Minimality of Each Stratum of the Surface Obtained in the Minimization Process	295
30.1. The Value of the Density Function is Always not Less Than Unity on Each Stratum, and Unity only at Regular Points	295
30.2. Each Stratum Is a Smooth Minimal Submanifold, Except Possibly a Set of Singular Points of Measure Zero	304
§31 Proof of Global Minimality for Constructed Stratified Surfaces	304
31.1. Proof of the Basic Existence Theorem for a Globally Minimal Surface	304
31.2. The Proof of the Theorem on the Coincidence of the Least Stratified Volume with the Least λ -Vector in a Variational Class	308
§32 The Fundamental (Co)Cycles of Globally Minimal Surfaces. Exact Realization and Exact Spanning	309
32.1. Fundamental (Co)Cycle Theorem	309
32.2. Exact Minimal Realization and Exact Minimal Spanning	312
32.3. Minimal Surfaces with Boundaries Homeomorphic to the Sphere	314
Appendix I. Minimality Test for Lagrangian Submanifolds in Kähler Manifolds. Submanifolds in Kähler Manifolds. Maslov Index in Minimal Surface Theory	319
§1 Definitions	319
§2 The Local Minimality Test for Φ -Lagrangian Submanifolds L in the Hermitian Manifold M^{2n}	320
§3 Certain Corollaries. New Examples of Minimal Surfaces. The Maslov Index for Minimal Lagrangian Submanifolds	326
§4 The Integrability Condition for the Form ψ	332
Appendix II. Calibrations, Minimal Surface Indices, Minimal Cones of Large Codimensional and the One-Dimensional Plateau Problem	335
