
Part I. Foundation

1. Curves	3
1.1 Curves and Coordinate Systems	3
1.2 Metric Properties of Plane Curves: Frenet Formulas	17
1.3 Metric Properties of Curves in Three-Space	22
2. The Notion of a Riemannian Metric	25
2.1 Riemannian Metrics on Domains of \mathbb{R}^n	25
2.2 Important Example: The Standard Two-Sphere	28
2.3 First Definition of Surfaces	30
3. Local Theory of Surfaces	35
3.1 Embedded Surfaces	35
3.2 The Tangent Plane to a Surface	38
3.3 Higher-Dimensional Manifolds in \mathbb{R}^n	40
3.4 The Differential of a Map. Embeddings and Immersions	41
3.5 The First Fundamental Form. Isothermal Coordinates. Area ..	43
3.6 The Second Fundamental Form. Mean and Gaussian Curvatures	46
3.7 Surfaces of Constant Mean Curvature	55
4. The Classification of Surfaces	67
4.1 The Canonical Fundamental Polygon of a Surface	67
4.2 Reconstructing the Surface from the Canonical Polygon	77
4.3 Orientability	90
4.4 Embedding and Immersing Surfaces in Three-Space	93
5. Abstract Manifolds	95
5.1 Definition of an Abstract Manifold	95
5.2 Partitions of Unity	98
5.3 An Application to Visual Geometry: Mountain Guide Maps ..	101
6. Critical Points and Morse Theory	105
6.1 Critical Points and Morse Functions	105
6.2 Level Sets Near Nondegenerate Critical Points	107

6.3	Handle Decomposition of a Compact Smooth Manifold	118
6.4	Homology and the Morse Inequalities	121
6.5	Some Embeddings of Surfaces in \mathbb{R}^3 and Their Critical Points	122
7.	Analyzing Human Body Motions Using Manifolds and Critical Points	127
7.1	A Detailed Example: The Hand and Arm	128
7.2	A Model of the Hand and Arm	129
7.3	A Procedure for Checking Task Feasibility	132
7.4	Analysis of a <i>Shorinji Kempo</i> Technique	135
8.	Computer Examination of Surfaces and Morse Functions	139
8.1	The Reeb Graph and Molecules	139
8.2	Surface Codings for Computer-Aided Design	145
8.3	Modeling the Contact of Two Complex Objects Using the Reeb Graph	154
8.4	Coding of Nonorientable Surfaces	169
8.5	Coding of Complicated Morse Functions	172
9.	Height Functions and Distance Functions	181
9.1	Almost All Height Functions Are Morse Functions	181
9.2	Sard's theorem	184
9.3	Proof That Almost All Height Functions Are Morse Functions	184
9.4	Almost All Distance Functions are Morse Functions	187
10.	Homotopies and Surface Generation	191
10.1	Homotopies and Homotopy Equivalence	191
10.2	A Homotopy-Based Model for Smooth Surface Generation	191
11.	Homology	211
11.1	Simplicial Homology	211
11.2	Visualization of Homology Groups	217
11.3	Algorithmic Calculation of Homology Groups	224
11.4	Cell complexes	228
11.5	The Degree of a Map	231
11.6	Cell Homology	235
11.7	Example Calculations of Homology Groups	240
11.8	The Homology Exact Sequence	242
12.	Geodesics	245
12.1	Definition and basic properties	245
12.2	Geodesics on Simple Surfaces	249

13.	Transformation Groups	263
378	13.1 Lie Groups and Lie Algebras	263
378	13.2 Some Transformation Groups in the Plane	265
378	13.3 Some Transformation Groups in Space	274
378	13.4 Some Transformation Groups in Higher Dimensions	276
088	13.5 Discrete Transformation Groups in Two and Three Dimensions	279

Part II. Advanced Subjects

108	14. Hyperbolic Geometry and Topology (A. T. Fomenko and S. V. Matveev)	289
	14.1 Introduction	289
	14.2 Two-Dimensional Hyperbolic Geometry	290
	14.3 Three-Dimensional Hyperbolic Geometry	298
	14.4 The Complexity of Three-Manifolds	299
	14.5 Constant-Energy Sets of Integrable Hamiltonian Systems Can- not be Hyperbolic	302
	14.6 The Computer Classification of Manifolds of Small Complexity	303
	14.7 Description of Q_1^d and Q_2^d	307
	15. Hamiltonian Systems with Two Degrees of Freedom (A. V. Bolsinov)	313
	15.1 Introduction	313
	15.2 Basic Notions	313
	15.3 The Saddle-Saddle Case	320
	15.4 The Focus-Focus Case	323
	15.5 The Center-Center and Center-Saddle Cases	324
	15.6 Circle Molecules	325
	16. Topological and Orbital Analysis of Integrable Problems (O. E. Orël)	331
	16.1 Introduction	331
	16.2 The Goryachev–Chaplygin Problem	334
	16.3 The Lagrange Problem	342
	17. Orbital Invariant of Integrable Hamiltonian Systems (S. Takahashi)	349
	17.1 Introduction	349
	17.2 Techniques for Numerical Calculations	350
	17.3 The Goryachev–Chaplygin Case	351
	17.4 The Lagrange Case	354

18. Ridges, Ravines and Singularities	
(A. G. Belyaev, E. V. Anoshkina, T. L. Kunii)	375
18.1 Introduction	375
18.2 Ridges, ravines, and caustic singularities	376
18.3 Ridges, ravines, and distance function singularities	379
18.4 Distance function singularities and garment wrinkles modeling	380
Bibliography	385
Index	391
