

Introduction	xi
1. Symplectic Geometry and the Integration of Hamiltonian Systems	1
1. <i>Symplectic manifolds</i>	1
1.1. Symplectic Structure and its Canonical Representation. Skew-Symmetric Gradient	1
1.2. The Geometric Properties of Symplectic Structures	4
1.3. Hamiltonian Vector Fields	8
1.4. The Poisson Bracket and Hamiltonian Field Integrals	11
1.5. Degenerate Poisson Brackets	15
2. <i>Symplectic Geometries and Lie Groups</i>	17
2.1. Summary of the Necessary Results on Lie Groups and Lie Algebras	17
2.2. Orbits of the Coadjoint Representation and the Canonical Symplectic Structure	22
2.3. Differential Equations for Invariants and Semi-Invariants of the Coadjoint Representation	27
3. <i>Liouville's Theorem</i>	30
3.1. Commutative Integration of Hamiltonian Systems	30
3.2. Non-Commutative Lie Algebras of Integrals	32
3.3. Theorem of Non-Commutative Integration	34
3.4. Reduction of Hamiltonian Systems with Non-Commutative Symmetries	36
3.5. Orbits of the Coadjoint Representation as Symplectic Manifolds	46
3.6. The Connection between Commutative and Non-Commutative Liouville Integration	47

4.	<i>Algebraicization of Hamiltonian Systems on Lie Group Orbits</i>	52
4.1.	The Realization of Hamiltonian Systems on the Orbits of the Coadjoint Representation	52
4.2.	Examples of Algebraicized Systems	58
5.	<i>Complete Commutative Sets of Functions on Symplectic Manifolds</i>	63
2.	Sectional Operators and Their Applications	67
6.	<i>Sectional Operators, Finite-Dimensional Representations, Dynamic Systems on the Orbits of Representation</i>	67
7.	<i>Examples of Sectional Operators</i>	71
7.1.	Equations of Motion of a Multi-Dimensional Rigid Body with a Fixed Point and Their Analogs on Semi-Simple Lie Algebras. The Complex Semi-Simple Series	71
7.2.	Hamiltonian Systems of the Compact and the Normal Series	75
7.3.	Equations of Inertial Motion of a Multi-Dimensional Rigid Body in an Ideal Fluid	79
7.4.	Equations of Inertial Motion of a Multi-Dimensional Rigid Body in an Incompressible Ideally Conductive Fluid	89
3.	Sectional Operators on Symmetric Spaces	100
8.	<i>Construction of the Form F_C and the Flow \dot{X}_Q in the Case of a Symmetric Space</i>	100
9.	<i>The Case of the Group $\mathfrak{H} = \mathfrak{B} = (\mathfrak{H} \times \mathfrak{H})/\mathfrak{H}$ (Symmetric Spaces of Type II)</i>	105
10.	<i>The Case of Type I, III, IV Symmetric Spaces</i>	107
10.1	Symmetric Spaces of Maximal Rank	107
10.2.	The Symmetric Space $S^{n-1} = \text{SO}(n)/\text{SO}(n-1)$ (The Real Case)	111
10.3.	Hamiltonian Flows \dot{X}_Q , Symplectic Structures F_C and the Equations of Motion of Analogs of a Multi-Dimensional Rigid Body	120
10.4.	The Symmetric Space $S^{n-1} = \text{SO}(n)/\text{SO}(n-1)$ (The Complex Case)	121
10.5.	Examples of Flows \dot{X}_Q on S^{n-1} (The Complex Case)	131

4. Methods of Construction of Functions in Involution on Orbits of Coadjoint Representation of Lie Groups	136
11. Method of Argument Translation	136
11.1. Translations of Invariants of Coadjoint Representation	136
11.2. Representations of Lie Groups in the Space of the Functions on the Orbits and Corresponding Involutive Sets of Functions	138
12. Methods of Construction of Commutative Sets of Functions Using Chains of Subalgebras	143
13. Method of Tensor Extensions of Lie Algebras	147
13.1. Basic Definitions and Results	147
13.2. The Proof of the General Theorem	151
13.3. The Application of the Algorithm (\mathfrak{A}) to the Construction of S -Representations	160
13.4. Algebras with Poincaré Duality	162
14. Similar Functions	167
14.1. Partial Invariants	167
14.2. Involutivity of Similar Functions	168
15. Contractions of Lie Algebras	171
15.1. Restriction Theorem	171
15.2. Contractions of \mathbb{Z}_2 -Graded Lie Algebras	174
5. Complete Integrability of Hamiltonian Systems on Orbits of Lie Algebras	179
16. Complete Integrability of the Equations of Motion of a Multi-Dimensional Rigid Body with a Fixed Point in the Absence of Gravity	179
16.1. Integrals of Euler Equations on Semi-Simple Lie Algebras	179
16.2. Examples for Lie Algebras of $\mathfrak{so}(3)$ and $\mathfrak{so}(4)$	185
16.3. Cases of Complete Integrability of Euler's Equations on Semi-Simple Lie Algebras	189
17. Cases of Complete Integrability of the Equations of Inertial Motion of a Multi-Dimensional Rigid Body in an Ideal Fluid	194
18. The Case of Complete Integrability of the Equations of Inertial Motion of a Multi-Dimensional Rigid Body in an Incompressible, Ideally Conductive Fluid	198
18.1. Complete Integrability of the Euler Equations on Extensions $\Omega(G)$ of Semi-Simple Lie Algebras	198

18.2. Complete Integrability of a Geodesic Flow on $T^*\Omega(\mathfrak{G})$	203
18.3. Extensions of $\Omega(G)$ for Low-Dimensional Lie Algebras	204
19. <i>Some Integrable Hamiltonian Flows with Semi-Simple Group of Symmetries</i>	205
19.1. Integrable Systems in the 'Compact Case'	205
19.2. Integrable Systems in the Non-Compact Case. Multi-Dimensional Lagrange's Case	208
19.3. Functional Independence of Integrals	212
20. <i>The Integrability of Certain Hamiltonian Systems on Lie Algebras</i>	214
20.1. Completely Involutive Sets of Functions on Singular Orbits in $\mathfrak{su}(m)$	215
20.2. Completely Involutive Sets of Functions on Affine Lie Algebras	219
21. <i>Completely Involutive Sets of Functions on Extensions of Abelian Lie Algebras</i>	224
21.1. The Main Construction	224
21.2. Lie Algebras of Triangular Matrices	232
22. <i>Integrability of Euler's Equations on Singular Orbits of Semi-Simple Lie Algebras</i>	236
22.1. Integrability of Euler's Equations on Orbits O Intersecting the Set $tH_{\mathbb{R}}$, $t \in \mathbb{C}$	236
22.2. Integrability of Euler's Equations $\dot{x} = [x, \varphi_{abD}(x)]$ for Singular a	244
22.3. Integrability of Euler's Equations $\dot{x} = [\dot{x}, \varphi_{abD}(x)]$ on the Subalgebra G_n Fixed Under the Canonical Involutive Automorphism $\sigma: G \rightarrow G$ for Singular Elements $a \in G$	247
22.4. Integrability of Euler's Equations for an n -Dimensional Rigid Body	253
23. <i>Completely Integrable Hamiltonian Systems on Symmetric Spaces</i>	254
23.1. Integrable Metrics ds_{abD}^2 on Symmetric Spaces	254
23.2. The Metrics ds_{ab}^2 on a Sphere S^n	257
23.3. Applications to Non-Commutative Integrability	263
24. <i>Morse's Theory of Completely Integrable Hamiltonian Systems. Topology of the Surfaces of Constant Energy Level of Hamiltonian Systems, Obstacles to Integrability and Classification of the Rearrangements of the General Position of Liouville Tori in the Neighborhood of a Bifurcation Diagram</i>	266

24.1. The Four-Dimensional Case	266
24.2. The General Case	270
