Preface		vii
<b>Chapter 1</b>	<b>Preliminary Results</b>	<b>1</b>
1.1	Graphs . . . . .	1
1.1.1	Topological and framed graphs, their equivalence . . . .	2
1.1.2	Operations on graphs . . . . .	3
1.1.3	Boundary of graph, local graph . . . . .	5
1.1.4	Smooth structure on topological graph . . . . .	6
1.2	Parametric networks . . . . .	7
1.2.1	Main definitions . . . . .	7
1.2.2	Classes of networks' smoothness . . . . .	8
1.3	Network-traces . . . . .	9
1.3.1	Networks-traces and their canonical representatives . .	10
1.4	Stating of variational problem . . . . .	13
1.4.1	Construction of edge functionals . . . . .	13
1.4.1.1	Classical variational functional . . . . .	14
1.4.1.2	Classical functional of Bolza . . . . .	16
1.4.2	Construction of edge functionals for networks with fixed topology . . . . .	17
<b>Chapter 2</b>	<b>Networks Extremality Criteria</b>	<b>21</b>
2.1	Local structure of extreme parametric networks . . . . .	22
2.2	Local structure of extreme networks-traces . . . . .	27
2.2.1	Smooth Lagrangians . . . . .	27
2.2.2	Quasiregular Lagrangians . . . . .	29

<b>Chapter 3</b>	<b>Linear Networks in <math>\mathbb{R}^N</math></b>	<b>39</b>
3.1	Mutually parallel linear networks with a given boundary . . . .	40
3.2	Geometry of planar linear trees . . . . .	45
3.2.1	Twisting number of planar linear tree . . . . .	46
3.2.2	Main theorem . . . . .	47
3.3	On the proof of Theorem 3.2 . . . . .	47
3.3.1	Planar polygonal lines I: the case of general position . .	48
3.3.1.1	Twisting and turning . . . . .	49
3.3.1.2	A pair of polygonal lines in general position . .	51
3.3.1.3	Caps . . . . .	55
3.3.2	Planar polygonal lines II: the general case . . . . .	56
3.3.3	Twisting number of a planar linear tree . . . . .	64
3.3.3.1	Proper linear trees . . . . .	64
3.3.3.2	Quasi-geodesics . . . . .	65
3.3.3.3	Caps . . . . .	66
3.3.4	Proof of Theorem 3.2 . . . . .	68
3.3.4.1	The case $p = q$ . . . . .	69
3.3.4.2	The case $p < q$ . . . . .	72
<b>Chapter 4</b>	<b>Extremals of Length Type Functionals: The Case of Parametric Networks</b>	<b>77</b>
4.1	Parametric networks extreme with respect to Riemannian length functional . . . . .	77
4.2	Local structure of weighted extreme parametric networks . . .	83
4.3	Polyhedron of extreme weighted networks in space, having some given type and boundary . . . . .	85
4.3.1	Structure of the set of extreme weighted networks . . .	87
4.3.2	Immersed extreme weighted Steiner networks in the plane	92
4.4	Global structure of planar extreme weighted trees . . . . .	94
4.5	Geometry of planar embedded extreme weighted binary trees .	95
4.5.1	Twisting number of embedded planar weighted binary trees . . . . .	95
<b>Chapter 5</b>	<b>Extremals of the Length Functional: The Case of Networks—Traces</b>	<b>99</b>
5.1	Minimal networks on Euclidean plane . . . . .	100
5.1.1	Correspondence between planar binary trees and diagonal triangulations . . . . .	101

5.1.2	Structural elements of diagonal triangulations . . . . .	103
5.1.3	Tiling realization of binary trees whose twisting number is at most five . . . . .	104
5.1.4	Tilings and their properties . . . . .	106
5.1.4.1	Decompositions of a tiling into a skeleton and growths . . . . .	106
5.1.4.2	Decomposition of a tree skeleton into branching points and linear parts . . . . .	108
5.1.4.3	Axis . . . . .	108
5.1.5	Structural elements of skeletons from $\mathcal{WP}_5$ . . . . .	110
5.1.5.1	Branching points of a tree skeletons . . . . .	110
5.1.5.2	Linear parts . . . . .	111
5.1.6	Operations of reduction and antireduction . . . . .	112
5.1.6.1	Cutting and pasting . . . . .	112
5.1.6.2	Reduction of planar binary tree . . . . .	113
5.1.6.3	Reduction of tilings from $\mathcal{WP}_5$ . . . . .	114
5.1.7	Profiles and their properties . . . . .	115
5.1.7.1	Definition of profiles . . . . .	115
5.1.7.2	Relation between the twisting numbers of profiles and the twisting number of the tiling . .	116
5.1.7.3	Terminological remark . . . . .	116
5.1.8	Classification Theorem for skeletons from $\mathcal{WP}_5$ . . . . .	116
5.1.8.1	Directions of ending linear parts of skeletons from $\mathcal{WP}_5$ . . . . .	118
5.1.8.2	Codes of non-degenerate 6-skeletons . . . . .	118
5.1.9	Location of the growths of tilings from $\mathcal{WP}_5$ on their skeletons . . . . .	119
5.1.10	Theorem of realization . . . . .	120
5.1.11	Minimal binary trees with regular boundary . . . . .	121
5.1.11.1	Complete classification of local minimal skeletons with regular boundaries . . . . .	121
5.1.11.2	Some properties of tilings from $\mathcal{WP}_5$ having $RM$ -realization . . . . .	123
5.1.12	Growths and linear parts of minimal networks with convex boundaries . . . . .	124
5.1.12.1	Ending growths . . . . .	125
5.1.12.2	Ending vertices . . . . .	126
5.1.12.3	Geometry of ending linear parts . . . . .	127

(a)	The length of the tongue: the ending snake has growths. . . . .	128
(b)	The length of the tongue: the ending snake is not attached with growths, but the ending linear part has a break. . . . .	131
(c)	Characteristic half-planes. . . . .	132
(d)	Estimations on the length of the tongue. . . . .	133
(e)	The length of the tail: the ending linear part has a break, but the ending snake is attached with growths. . . . .	135
(f)	Mutual location of ending linear parts. . . . .	139
5.1.13	Quasiregular polygons which cannot be spanned by minimal binary trees . . . . .	145
5.1.14	Non-degenerate minimal networks with convex boundary. Cyclical case . . . . .	147
5.1.14.1	Planar minimal realization of non-degenerate graphs and Steiner networks . . . . .	148
5.1.14.2	Fundamental cycles of non-degenerate minimal networks with convex boundaries. Trivial networks. . . . .	149
5.1.14.3	Twisting number of trivial networks . . . . .	149
5.1.14.4	Tiling realization of a trivial network whose twisting number does not exceed five . . . . .	150
5.1.14.5	Description of tilings of general form . . . . .	151
(g)	Skeletons and growths . . . . .	151
(h)	Tiling hulls and kernels . . . . .	151
(i)	Branching points . . . . .	152
(j)	Linear parts . . . . .	153
(k)	Structural elements . . . . .	154
(l)	Macroelements and ends . . . . .	155
5.1.14.6	Skeletons from $\mathcal{P}_5$ . . . . .	156
(m)	Structural elements . . . . .	156
(n)	Directions of the ending macroelements of a skeleton from $\mathcal{P}_5$ . . . . .	156
(o)	Codes of skeletons from $\mathcal{P}_5$ . . . . .	158
(p)	Polygrowths . . . . .	158

5.1.14.7	Location of growths on skeletons of tilings from $\mathcal{P}_5$ . . . . .	159
5.1.14.8	Final remark . . . . .	160
5.2	Closed minimal networks on closed surfaces of constant curvature	160
5.2.1	Minimal networks on surfaces of constant positive curvature . . . . .	162
5.2.1.1	Closed minimal networks on $S^2$ . . . . .	162
5.2.1.2	Closed minimal networks on $\mathbb{R}P^2$ . . . . .	163
5.2.2	Classification of closed minimal networks on flat tori . . . . .	164
5.2.2.1	Description of flat metrics on a two-dimensional torus . . . . .	165
5.2.2.2	Flat tori translations groups, lattices, and universal coverings . . . . .	166
5.2.2.3	Net geodesics . . . . .	167
5.2.2.4	The type of a network . . . . .	170
5.2.2.5	Characteristic triangle . . . . .	174
5.2.2.6	Classification theorems . . . . .	175
5.2.3	Classification of closed minimal networks on flat Klein bottles . . . . .	180
5.2.3.1	Description of flat metrics on a Klein bottle . . . . .	180
5.2.3.2	The universal covering of a flat Klein bottle . . . . .	181
5.2.3.3	The covering of a flat Klein bottle by a flat torus . . . . .	182
5.2.3.4	Regular networks . . . . .	184
5.2.3.5	Classification theorems . . . . .	185
5.2.4	Closed networks on two-dimensional surfaces of negative curvature . . . . .	187
5.2.4.1	Metric restrictions on the structure of closed networks . . . . .	187
5.2.4.2	Examples of closed minimal networks on surfaces of negative curvature . . . . .	188
5.2.4.3	Enumeration of closed local minimal networks on surfaces of constant negative curvature up to topological equivalence . . . . .	190
5.3	Closed local minimal networks on surfaces of polyhedra . . . . .	192
5.3.1	General properties of local minimal networks on polyhedra . . . . .	192
5.3.1.1	Developments . . . . .	194
5.3.1.2	Local geodesics . . . . .	196

5.3.1.3	Local structure of minimal networks on polyhedra . . . . .	198
5.3.1.4	The Gauss–Bonnet theorem for polyhedra . . . . .	199
5.3.2	Metric and topological restrictions on the structure of closed minimal networks . . . . .	199
5.3.2.1	T. V. Pavlyukevich. Existence of closed local minimal networks on convex polyhedra . . . . .	200
5.3.2.2	Cells of networks on convex polyhedra . . . . .	201
5.3.2.3	The case of regular polyhedra . . . . .	203
5.3.3	Classification of closed minimal networks on regular tetrahedron . . . . .	205
5.3.3.1	The branching covering of tetrahedra by the plane and by flat tori . . . . .	205
5.3.3.2	Regular networks . . . . .	208
5.3.3.3	Classification theorems . . . . .	210
5.3.4	“Reproduction” algorithm for closed local minimal networks on polyhedra . . . . .	211
5.3.5	Closed geodesics on the cube . . . . .	216
5.4	M. V. Pronin. Morse indices of local minimal networks . . . . .	218
5.4.1	Introduction . . . . .	218
5.4.2	Index form . . . . .	218
5.4.3	Minimal networks on non-positive curvature manifolds . . . . .	224
5.4.4	Minimal networks on the sphere . . . . .	226
5.4.5	Index Theorem . . . . .	228
5.5	G. A. Karpunin. Morse theory for planar linear networks . . . . .	232
5.5.1	Introduction . . . . .	232
5.5.2	Morse theory for simplicial complexes . . . . .	234
5.5.3	Morse theory for special metric spaces . . . . .	235
5.5.4	Morse theory for minimal networks . . . . .	240
5.5.5	Some applications . . . . .	247
<b>Chapter 6</b>	<b>Extremals of Functionals Generated by Norms</b>	<b>253</b>
6.1	Norms of general form . . . . .	256
6.1.1	Local minimal and extreme networks . . . . .	256
6.1.2	The first variation of straight segment length in a normalized space . . . . .	257
6.1.3	Structure of extreme curves . . . . .	263
6.1.4	Local structure of extreme linear parametric networks . . . . .	264

6.1.5	Networks–traces extremality criterion . . . . .	271
6.2	Stability of extreme binary trees under deformations of the boundary . . . . .	280
6.3	Planar norms with strictly convex smooth circles . . . . .	283
6.3.1	Extremality criterion for networks–traces . . . . .	283
6.3.2	Geometry of extreme networks–traces . . . . .	288
6.3.2.1	Relations with Euclidean norm case . . . . .	288
6.3.2.2	Geometry of boundary sets and twisting number . . . . .	289
6.3.2.3	Set of extreme networks having a fixed type . . . . .	291
6.3.2.4	Surfaces . . . . .	292
6.3.2.5	Norms with ellipsoidal circles . . . . .	296
6.4	Manhattan local minimal and extreme networks . . . . .	297
6.4.1	General properties . . . . .	298
6.4.2	Extreme networks and linear networks . . . . .	299
6.4.3	Extreme networks on the Manhattan plane . . . . .	300
