

<b>Notation</b>	<b>vii</b>
<b>Preface</b>	<b>ix</b>
<b>Chapter I. Elements of differential geometry</b>	<b>1</b>
1. The notion of a topological space	1
2. Continuous mappings of topological spaces	6
3. Countability axioms	6
4. Quasi-compact topological spaces	10
5. Separation axioms	11
6. Sequentially compact topological spaces	12
7. Construction of topological spaces	13
8. Smooth manifolds	14
9. Geometry of smooth manifolds	19
10. Elements of tensor algebra	22
11. Smooth mappings of smooth manifolds	25
12. Exterior differential forms on manifolds	28
13. Integration of exterior differential forms	36
14. De Rham cohomology	46
15. Elements of Riemannian geometry	52
16. Elements of affine geometry	57
17. Curvature tensor	68
18. Geodesics and the shortest	73
<b>Chapter II. Lie Groups and Lie Algebras</b>	<b>81</b>
1. Lie groups	82
2. Lie algebras	84
3. Trajectories of left-invariant vector fields	88
4. The exponential mapping	92
5. Displacement of functions along trajectories	94
6. Actions of Lie groups	96
7. Linear representations of Lie groups	100
8. Automorphisms of Lie groups	102
9. Maurer-Cartan formula	104
10. Basic global theorems about Lie groups	106
11. Problems of non-simple connectedness. Coverings	115
12. Lie subgroups	128
13. Nilpotent representations of Lie algebras	131
14. Solvable Lie algebras and their linear representations	135

15. Representations of nilpotent Lie algebras	138
16. Semisimple Lie algebras	140
17. Cartan subalgebras	141
18. Killing metric	144
19. Cartan's criterion	145
20. Structure of semisimple Lie algebras	148
21. Simple Lie algebras	153
22. Analyticity	154
<b>Chapter III. Symmetric spaces</b>	<b>163</b>
1. Notion of a symmetric space	163
2. Compact Lie groups as Riemannian symmetric spaces	169
3. Involute automorphisms of Lie groups and related Riemannian symmetric spaces	175
4. Connections in principal bundles	182
5. Basic theorems	192
6. Lie groups as symmetric spaces	199
7. Totally geodesic submanifolds	205
8. Totally geodesic submanifolds and involute automorphisms	212
9. Riemannian symmetric spaces	219
<b>Chapter IV. Smooth vector bundles and characteristic classes</b>	<b>225</b>
1. Vector bundles	226
2. Connections and metrics in bundles	228
3. Covariant derivation and curvature	232
4. Characteristic classes of vector bundles	235
5. Basic characteristic classes	238
6. Connectedness structures in principal bundles of frames	244
7. Transgression	247
8. The Euler class	252
9. Geometric sense of the Euler class in dimension two	258
10. Geometric sense of the Euler class in higher dimensions	271
<b>Chapter V. Applications</b>	<b>279</b>
1. Commutation equations for differential operators	280
2. Poisson brackets of hydrodynamic type and left-symmetric algebras	288
3. Differential equations of motion of rigid body about a fixed point	297
4. Compatible Poisson brackets	308
5. Invariants of coadjoint representation	314
<b>Bibliography</b>	<b>321</b>
<b>Index</b>	<b>323</b>
