Igor M. Nikonov

*Traits of crossings and functorial maps
in knot theory*

One of the major applications of parity theory are picture-valued invariants of knots such as parity bracket. We present a construction of such invariants by a knot parity or index, and consider several examples of such invariants for knots.

SCIENTIFIC SEMINAR
“DIFFERENTIAL GEOMETRY AND APPLICATIONS”

headed by Academician of RAS Anatoly T. Fomenko

The seminar takes place online in ZOOM on Mondays
from 4:45 p.m. to 6:20 p.m. (Moscow time)

The zoom-ref is provided only to registered persons

To be registered, ask any participant of our seminar to endorse you
Announcements of previous talks can be found on the seminar website
